Abstract: Life with Corona survey is a citizen science project that will collect real-time data on the social and economic consequences of COVID-19 across the globe. It intends to capture the voices of affected citizens around the world, in order to build a global knowledge base on how people are dealing with this exceptional situation. The 10-minute online survey includes periodically changing modules on topics such as mental health, consumption and eating habits, social cohesion and expectations towards politics and public administration. The questionnaire is currently available in 19 languages, with more being added. Data collection started on 23 March 2020 and will continue at least until the end of 2020. The aim is to reach 10,000 respondents per month until at least the end of the year.

Data description: Global online survey data. The data will be made available for academic non-profit analyses and results will be published in accordance with open access principles on www.lifewithcorona.org.
